Art Unit: 2862

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19, drawn to an imaging apparatus with housing and lens, and method of assembly thereof, classified in class 359, subclass 811.
- II. Claim 20, drawn to imaging apparatus with integrated light source, photosensor package and optical component, classified in class 250, subclass 216.
- III. Claim 21, drawn to an imaging system with housing, lens assembly and member for fixing said lens assembly with respect to the housing, classified in class 359, subclass 818.

The inventions are distinct, each from the other because:

Invention II and inventions I and III are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because an optical component other than the lens assembly of Groups I and III could be used in the combination of Group II, a different arrangement than the two surface configuration of Group I could be used to mount the optical component of the combination of Group II, and the optical component of the combination of Group II could be integrally formed without need of the fixing mechanism of Group III. The subcombination has separate utility such as in a camera system or optical measuring system.

Art Unit: 2862

In addition, Groups I and III are distinct from each other since they are drawn to independent inventive features associated with a lens assembly. Thus, the invention of Group I is directed to an apparatus providing first and second spaced reference surfaces for supporting a lens assembly, and does not require the fixing member of Group III. Likewise, the invention of Group III does not require the reference surface arrangement of Group I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

Any inquiry concerning this communication should be directed to G.R. Strecker at telephone number 305-4937.
